Smart Docs

Bug fixes

1. Fixed an issue where where continuous loading was displayed when clicking the "New Smart Docs" popup.

Baseline

Bug fixes

1. Fixed an issue where Comparison status was showing as "Changed" on compare tab even added link type was not defined in the admin panel.
2. Fixed an issue where invalid count of changed work items was appearing on compare baseline tab.
3. Fixed an issue where excessive calls were minimized through caching, allowing for the efficient generation of a difference report for 2,500 work items.

Modern Requirements4DevOps 2024 Update 1 - Patch 2

Review Management

Bug fixes

1. Fixed an issue where the post state was not updating from Draft to Active state.
2. Fixed an issue where the response field was displaying as a single line when "Submit comment" checkbox was marked as unchecked from the admin panel.

Smart Report

Bug fixes

1. Fixed an issue where incorrect default smart part selection and non-functional dropdowns were showing in the destab on generating Smart Report fron Simulation model.

Baseline

Bug fixes

1. Fixed an issue where work item grid was showing blank on compare tab when "Consider global link comparison" & "Context comparison toggle button" options were marked unchecked under the "Compare Baseline-Consider link comparison as Global vs Context" section in the General tab of the admin panel.

Modern Requirements4DevOps 2024 Update 1 – Patch 1

General

Bug fixes

1. Fixed an issue where creating a review from smart docs containing 5000 work items doesn't open the review in a new tab.
2. Fixed an issue where when clicking on workitem links from MR, continuous loading occurred on the ADO window.
3. Fixed an issue where in general Setting of admin panel, the dropdown fields of Configure parameter's was not allowed to change its field's value.

Smart Docs

Bug fixes

1. Fixed an issue where toggle button for the columns need to hide from version management and compare tab.
2. Fixed an issue where users were unable to find 5000 work items through a search query (tree of work items).
3. Fixed an issue where users were unable to create a clone and an error message "unable to add items" was showing after 10 minutes.

Review Management

Bug fixes

1. Fixed an issue where approval/reviewer comments were not showing in discussion tab when submit a comment in a Review.
2. Fixed an issue where the grid appears as the review view instead of smart doc view when review created from smart docs.

Smart Report

Bug fixes

1. Fixed an issue where continues loading was appearing when generating report from smart doc TestAPI that contains large number of test cases.

Trace Analysis

Bug fixes

1. Fixed an issue where workitem type column position swapped with ID/link type column in generated excel file when merged view set to 'ON'.
2. Fixed an issue where link types related issues were occuring on intersection/hiorizontal matrix.

Baseline

Bug fixes

1. Fixed an issue where some error occurred in creating baseline pop up was showing when copy baseline with change server.

Use Case

Bug fixes

1. Fixed an issue where Use case flowchart was not showing all branches.

Appendix A: Hardware Requirements for Redis

According to Modern Requirements4DevOps, approximate memory usage per user is 477.8495 KB (0.4666 MB). Maximum hard drive space required is 1.5 * (memory size). For instance, in case of an 8 GB RAM, the maximum hard drive space occupied by Redis would be 12 GB.
